LEARNING TOGETHER

Education Finland is a governmental cluster programme supporting Finnish educational service and product providers in their growth on global education markets. The programme is coordinated by the Finnish National Agency for Education, working closely with the Ministry of Education and Culture, the Ministry for Foreign Affairs, and Business Finland.

Education Finland brings together top expertise and solutions from Finland. We are happy to help you on your path to educational success.

EDUCATION IN FINLAND

The quality and outcomes of education in Finland are among the best in the world. Here are some aspects that make Finnish education special and set it apart from other education systems in the world:

1 The Finnish education system has been built on the egalitarian principle of **good quality universal education** which is free, inclusive and comprehensive. The same educational opportunities are available to all citizens irrespective of ethnic origin, wealth or place of residence.

2 The Finnish system is very flexible and is based on the principle of **lifelong learning**. It has no dead ends, and learners can always continue their studies to an upper level of education.

3 **Teachers are highly trained** (master's degree is a requirement at all levels) and motivated. Teacher training places special emphasis on research-informed studies in pedagogical sciences. Teachers are given broad autonomy to decide how they teach and what resources they use.

4 Early childhood education and care (ECEC) lays the foundation for learning and is regulated by a national level core curriculum. ECEC is not only care, but goal-oriented and systematic, **pedagogically planned activities** that support children's development and learning. Learning through play is the key!

5 Children start their schooling when they are ready for it. The typical age for pre-school education is 6 and for first grade it is 7 years. In the early years, the amount of **homework given to students** is nominal, and school days are relatively short.

6 The education system focuses on helping each student to reach their own potential. There are **no national standardized exams** to rank the students. The main aim of the national evaluations of learning outcomes is to follow at national level how well the objectives set in the core curricula and qualifications have been reached. The results are not used to rank schools.

7 **Schools are inclusive** and special needs education is embedded in mainstream education. All pupils have the right to general support, intensified support or special support, depending on their needs. The aim is early intervention: preventing existing problems from becoming more serious later on.

8 Vocational education and training is not limited to the technical sector but covers all sectors of working life. Qualified and competent teachers, **flexible qualifications**, strong employment prospects and eligibility for further studies are some of the reasons making VET an attractive choice.

9 Students are encouraged to think and learn by doing. Phenomenal learning is part of the curriculum. Teachers and trainers are facilitators and coaches, developing collaborative learning experiences and using a wide array of **digital solutions to enhance learning**.

10 Problem based learning is at the core also in Finnish universities and universities of applied sciences. Teaching methods are based on discussion, student participation and working together. Graduates of Finnish institutions are **experts with transferable skills** and often have multidisciplinary expertise.

We are ready to share our know-how and build together new solutions to global and local challenges. With a mindset of partnership, we focus on capacity building, curriculum development and re-modelling education systems, through consultancy services to governments, education authorities, schools and organizations.

We believe this leads to inspiring learning environments where learners have an active role in what and how they learn, and truly hold a key to unlocking their own potential.

FIELDS OF EXPERTISE

DEGREES AND QUALIFICATIONS

Finnish degrees and qualifications are held in high regard all around the world, and serve as **a certificate of high level of competence and dedication**. Finnish education institutions offer a wide range of degree programs, training courses and vocational modules to build and enhance the abilities of professionals.

Finland has a sound track record in high-quality technical and vocational education and training (TVET), and this expertise can be successfully transferred to other countries and localized to yield the best results. In Finnish TVET, the competence-based modular system recognizes all learning, and provides graduates with **competences relevant to working life**.

Working life collaboration improves the effectiveness of education and training and facilitates students' employment.

Finnish universities are the most effective in the world when taking into account national income levels, according to a ranking of higher education systems (Universitas21, 2020). Our universities and universities of applied sciences offer **hundreds of English-taught bachelor's and master's degree programmes**, as well as **tailor-made customized global education services** such as Summer Schools, intensive programmes, study visits or distance learning courses for foreign students.

EDUCATIONAL REFORMS

The Finnish education system has been born as a result of long-term work and continuous reforms at all levels of education. Education Finland members can provide capacity building and **support for implementing wide-scale reforms** in teacher training, curriculum development, education management, quality assurance or other aspects of an education system. We are happy to share Finnish education expertise to help countries reach SDG4, which calls for access to quality education and lifelong learning opportunities for all by 2030.

TEACHER TRAINING AND EDUCATIONAL LEADERSHIP

Highly competent and motivated teachers are the cornerstone of the Finnish education system. In Finland, teachers are not only experts in their own subject area, but also experts in teaching and learning. Finnish **teacher education and training places special emphasis on the study of pedagogy**: learning the art of teaching,

tailored to how different people learn. Finnish offering in teacher training varies from short trainings and programmes to degree programmes.

EVALUATION AND QUALITY ASSURANCE

Evaluation and quality assurance are essential parts of any education system. The national evaluation system in Finland focuses on development instead of competition and rankings. The aim of the evaluations is to develop education and to **support learning while ensuring the quality of education**. The evaluations also produce information for local, regional and national decision-making. This approach to evaluation and quality assurance is something we are happy to share. Education Finland members offer a wide range of services from external audits and evaluations to assessment training.

LEARNING ENVIRONMENTS

Learning environments consist not just of the physical environment, but also the psychological factors and social relationships in which studying and learning occur. Through pedagogy driven design, Finnish service and product providers are able to create smart learning and innovation **environments which support a variety of teaching, studying and learning styles.**

Finnish learning environment providers offer service concepts that include planning and design of space, furniture, technology as well as deployment training and support.

LEARNING RESOURCES AND EDUCATIONAL TECHNOLOGY

Our members provide printed and digital learning resources and tools from early childhood education to vocational studies and higher education.

High quality learning materials have been one of the reasons behind the Finnish success in the educational field. Finnish publishing companies are trusted partners to education providers, with long experience in providing learning materials

that support the achievement of learning targets in the national curricula. Materials are developed by Finnish teachers, who are experts in pedagogy.

Finland enjoys one of the most advanced and expansive selection of educational technology for all levels of education. Also, educational technology in Finland is teacher-driven, and there is a good understanding how the **technology can complement innovative teaching methods.** In combination with the country's strong ICT sector and a booming gaming industry this has helped to create favorable conditions for developing cutting-edge digital learning solutions that make learning fun.

SCHOOL CONCEPTS

We cannot export the Finnish education system as such, but we can co-create schools with private school operators to deliver suitable elements of "Finnishness" to it to fit into the local context. Services in creating **Finnish international school concepts** can include everything from school architecture, designing the school's concept (academic plan), compiling a curriculum, refining operational processes, and training of teachers.

CORPORATE TRAINING

In the future, growth and profits rely on competent employees. Changes in strategy or transforming your company to the digital world call for **new skills and workplace learning**. Selected Education Finland member companies offer competence development and training programmes also for the (private) corporate sector. Corporate training programs and courses are tailored to the company's and future employee's needs.

FIELDS OF EXPERTISE

EDUCATIONAL TRAVEL AND VISITS

The high rankings and unique features of the Finnish education system attract people who travel to Finland to learn about or **experience first-hand the Finnish education system**. Such travellers include education professionals and schoolchildren alike. Their interest is often focused on one of the unique features of the Finnish education system, such as phenomenal and experimental learning or utilising nature as a learning environment. Finnish educational travel companies organize school visits, study tours, educational camps for schoolchildren and training programs linked to your visit, according to your particular needs.

EDUCATION FINLAND MEMBERS

Our members represent Finnish expertise from all aspects of education – following the principle of lifelong learning. They are able to bring you the best services, products, solutions and know-how when it comes to teaching and learning.

	graphogame.com
	• Learning materials and educational technology
	<p>GraphoGame is an academically researched learning game for teaching pre-school children early literacy skills in English, French and many more. With 250 million illiterate children in the world and up to 10% of all people having dyslexia, teachers and schools struggle to provide the 1-on-1 support these children need. GraphoGame produces analytics of the child's decoding & phonics practice, allowing for teachers to quickly react to bottlenecks in their learning.</p> <p>GraphoGame is evidence-based, meaning all content has been developed, studied and validated by experts in universities around the world, such as the University of Cambridge and University of Aix-Marseille.</p>

STAR LESSONS

starlessons.fi

- Teacher training and educational leadership

STAR LESSONS by House of Leading & Learning Ltd is a Finnish online practical pedagogy curriculum for teacher training. The objective is to enhance the knowledge and competence of teachers in 21st century pedagogies, pedagogical models, practices and digital learning skills.

Teachers can take ideas to their classrooms to create pedagogically meaningful learning opportunities for their students, and promote their capacity to learn. The curriculum has a strong emphasis on self-reflection. Star Lessons courses suit well K-12 teachers and teacher students; even university teachers benefit from them.
